

In The Sky At Night

- 1) In the dark sky late each night
There's also many a small thing that's bright
The full moon positioned quite high
Surrounded by plenty a shining star, no lie

- 2) Looking through a telescope many people try
Eager to have a nice view of everything in the sky
Of Astrologers again there's quite a few
Who try and predict many signs for me and you

- 3) In 1969 American Astronaut 'Neil Armstrong' was the first to land upon the moon
For other people to try again quite soon
And I'm not at all mistaken
When I say a lot of great pictures were taken

- 4) With the whole Universe being of a tremendous large size
By us humans it could never be fully travelled, as no-surprise
But we'll study of it all that we can do
And see what in the future does come true
