

The North Pole

1. At The North Pole it gets extremely cold
Or so me and many others have been told
Living there too long wouldn't be nice
With all the white very chilly snow and ice
2. With the journey going quite fine
Man first visited The North Pole in April 1909
A few people called Eskimos live there today
Who time to time go fishing without any delay
3. The Eskimos live in a home called an Igloo
Which is a building of snow and ice made by just a few
Here they have food and shelter yes
Though I bet it gets very cold or so I guess
4. At The North Pole as an interesting feature
You also get plenty a wild creature
Polar bears, arctic foxes and reindeers are to be seen
By anyone who in this area has been
5. With the climate beginning to change
The North Pole melting quite a bit isn't that strange
Though to bring the lodgers and travellers there a smile
It'll still be around for oh quite a while
