

The Life Of Professor Stephen Hawking

- 1) Professor Stephen Hawking was born in Oxford in January 1942
Before at the University College there he was to discover quite a lot for me and you
Because without any form of hesitation
He was to get many a great qualification
- 2) Stephen became a British cosmologist, author, Director of Research
And Theoretical Physicist yes
Was extremely very clever or so I guess
And with lots of writing participation
His all-round scientific knowledge got loads of publication
- 3) In 1963 Stephen was diagnosed with a form of Motor Neurone Disease unfortunately
But in spite of being wheelchair bound and needing a computerised voice system
He was to have a big family
Marrying Jane 1965 to 1995, and Elaine 1995 to 2006
Whilst getting up to all his clever scientific tricks
- 4) Stephen went on to have 3 children called Lucy, Robert and Timothy
Then 3 grandchildren for all his friends and relations to see
He also picked up 13 honorary degrees and even a CBE in 1982
With him and his all-round knowledge being deeply valued by me and you
- 5) Stephen in his life picked up plenty a medal, prize and award
And was often by the public to be deeply applaud
Though sadly in March 2018 he did die
And will now by everyone be largely missed no lie
